Intuition, Motion and Recreation

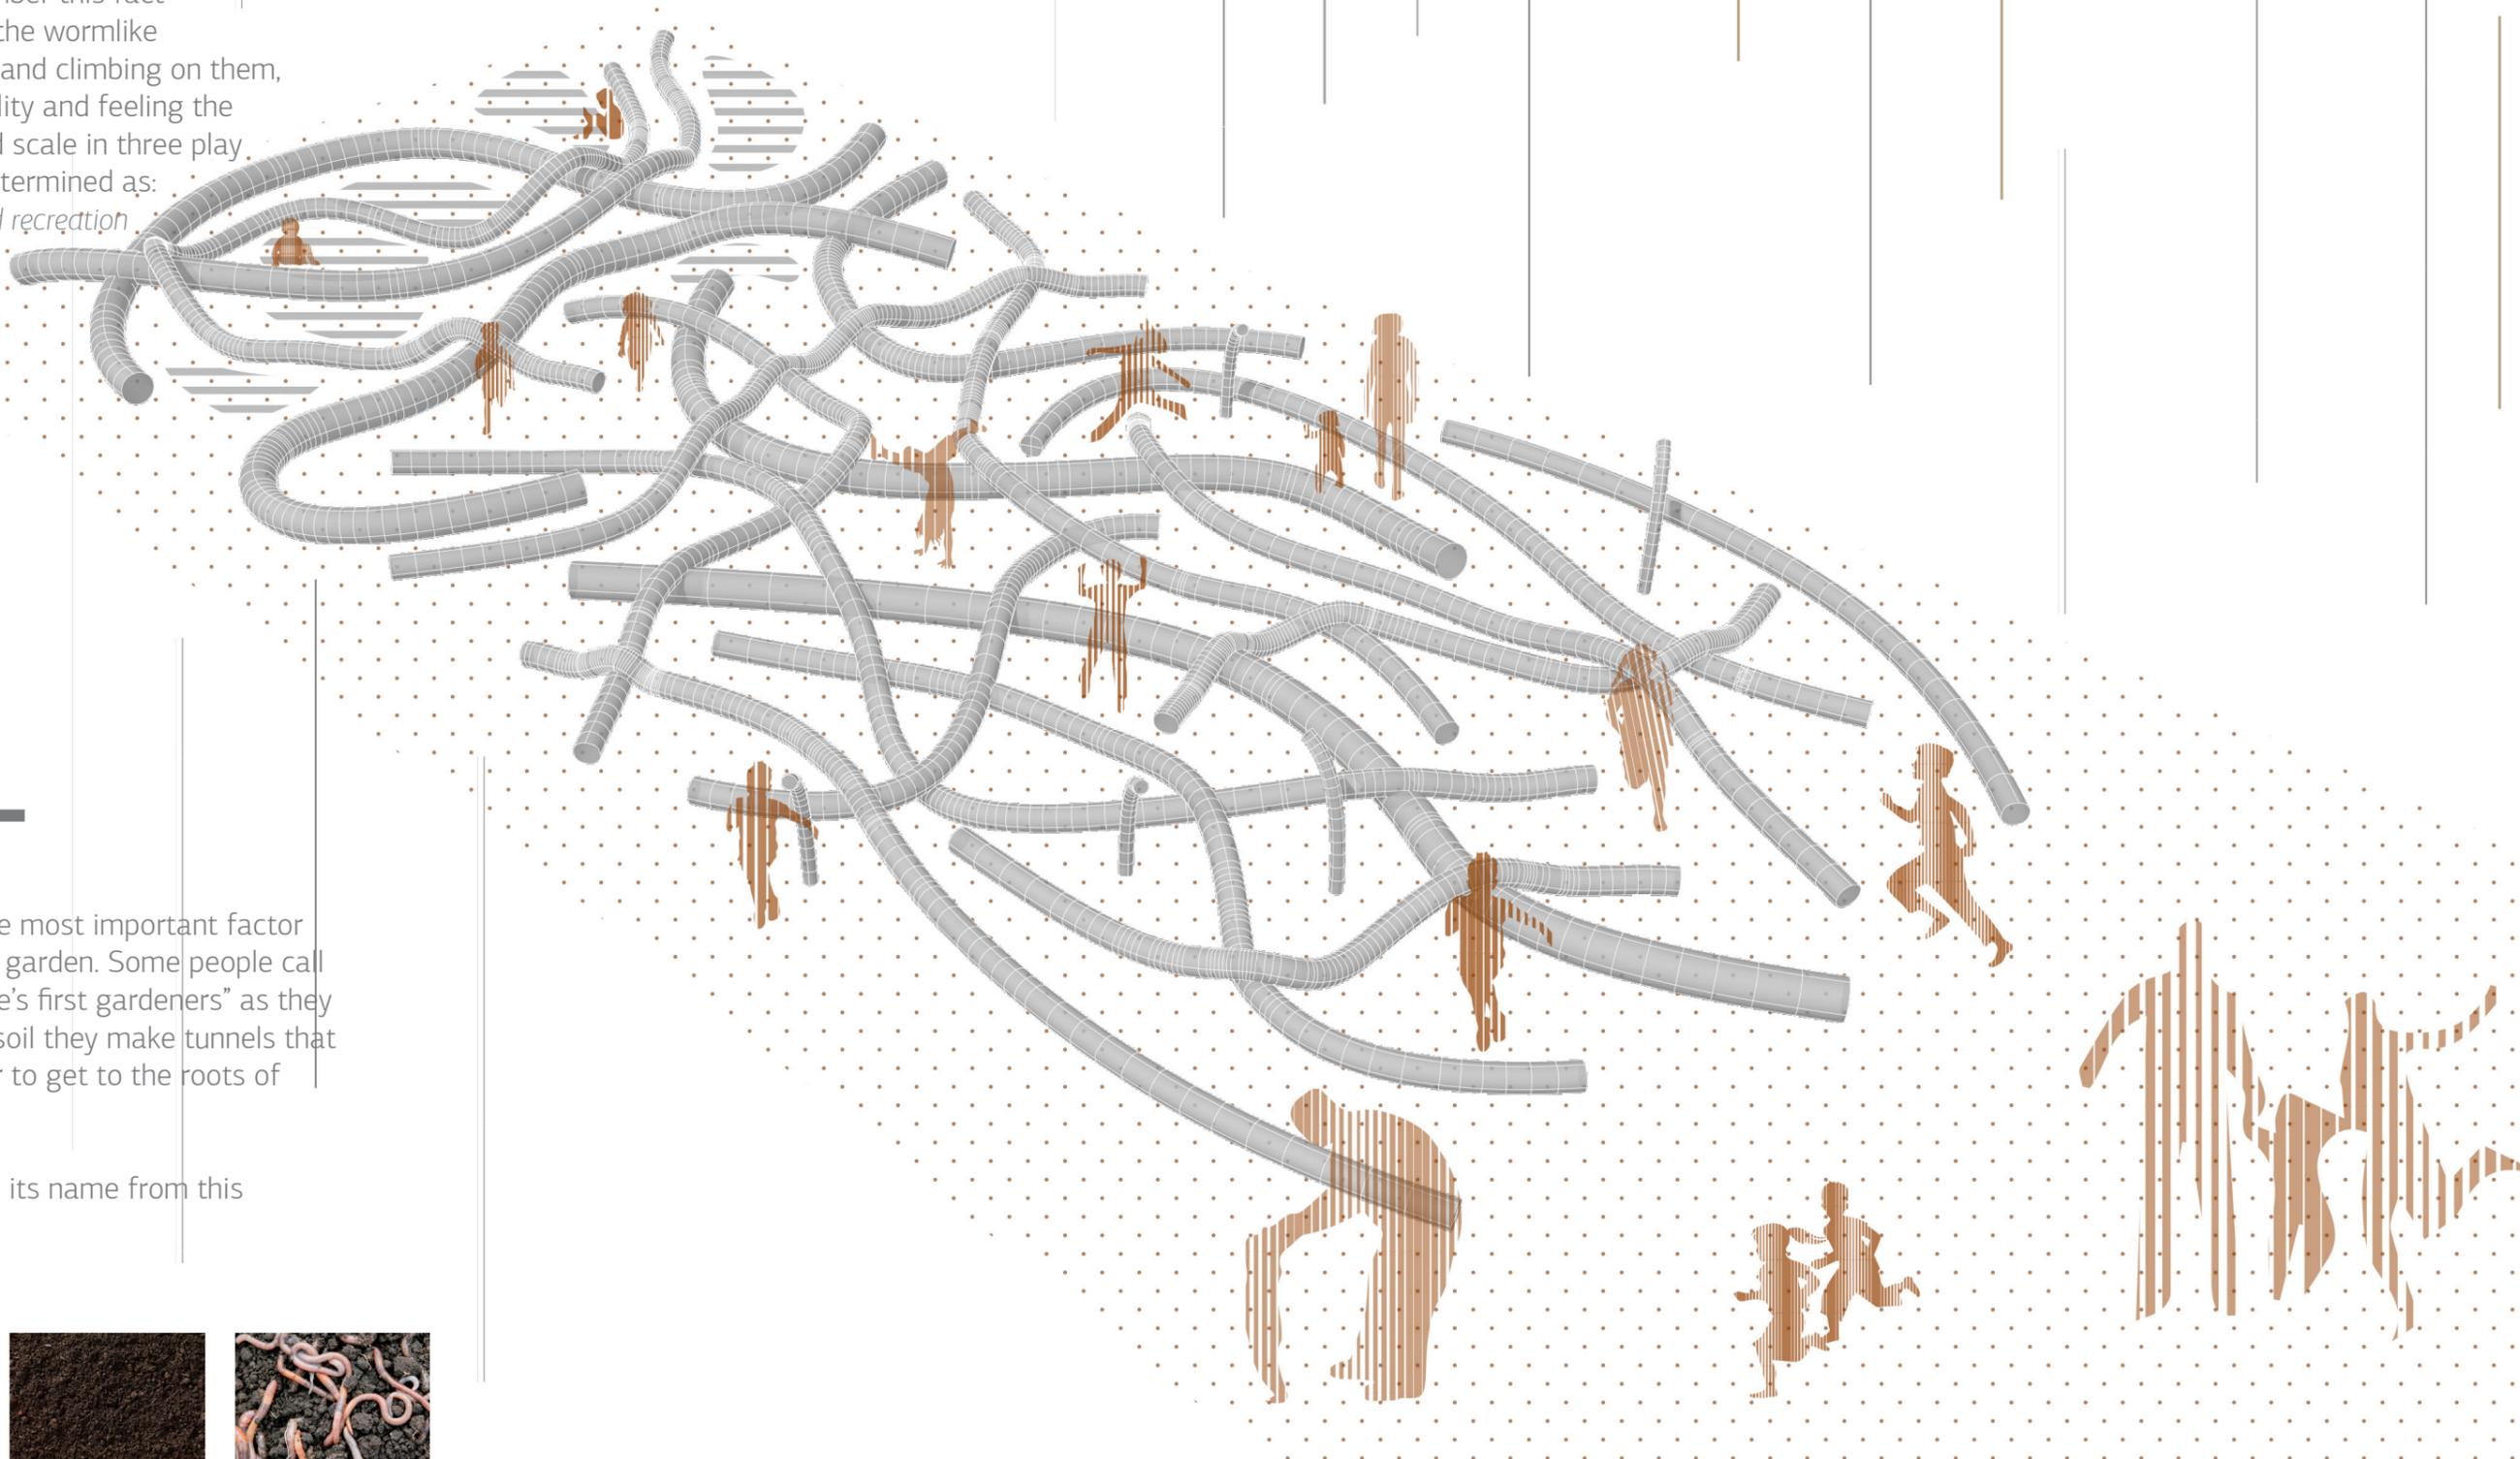

Nature is more than what it appears on the surface. It is not solely the vegetation. Soil is the existential and inseparable part of it.

Children will remember this fact while playing with the wormlike structures, moving and climbing on them, enjoying the flexibility and feeling the sense of space and scale in three play actions that are determined as: *intuition, motion and recreation*

INSPIRATION

Earthworms are the most important factor in the success of a garden. Some people call earthworms "nature's first gardeners" as they move through the soil they make tunnels that allow air and water to get to the roots of plants.

The proposal takes its name from this statement.

PLAN LAYOUT

The plan consists of three parts that were inspired by the three different play theories.

A- Intuition

In Practice or pre-exercise theory, Karl Groos suggests that play allows children to practice adult roles and instills in them skills that will later be necessary for survival.

B- Motion

In Surplus energy theory, Friedrich Schiller states that Humans build up excess energy that must be released through active play.

C- Recreation

In Recreation or relaxation theory, Moritz Lazarus proposes that play restores energy lost from work-related activities.

PLANTS AND MATERIALS

The installation consists of

- Poliurethane wire hose pipe with \varnothing 20 cm, \varnothing 30 cm, connected with iron pipe clamps;
- Meadow grass;
- Stabilized ground.

A- Intuition

B- Motion

C- Recreation
