

MIRROR CLOUD - MIROIR NUAGE

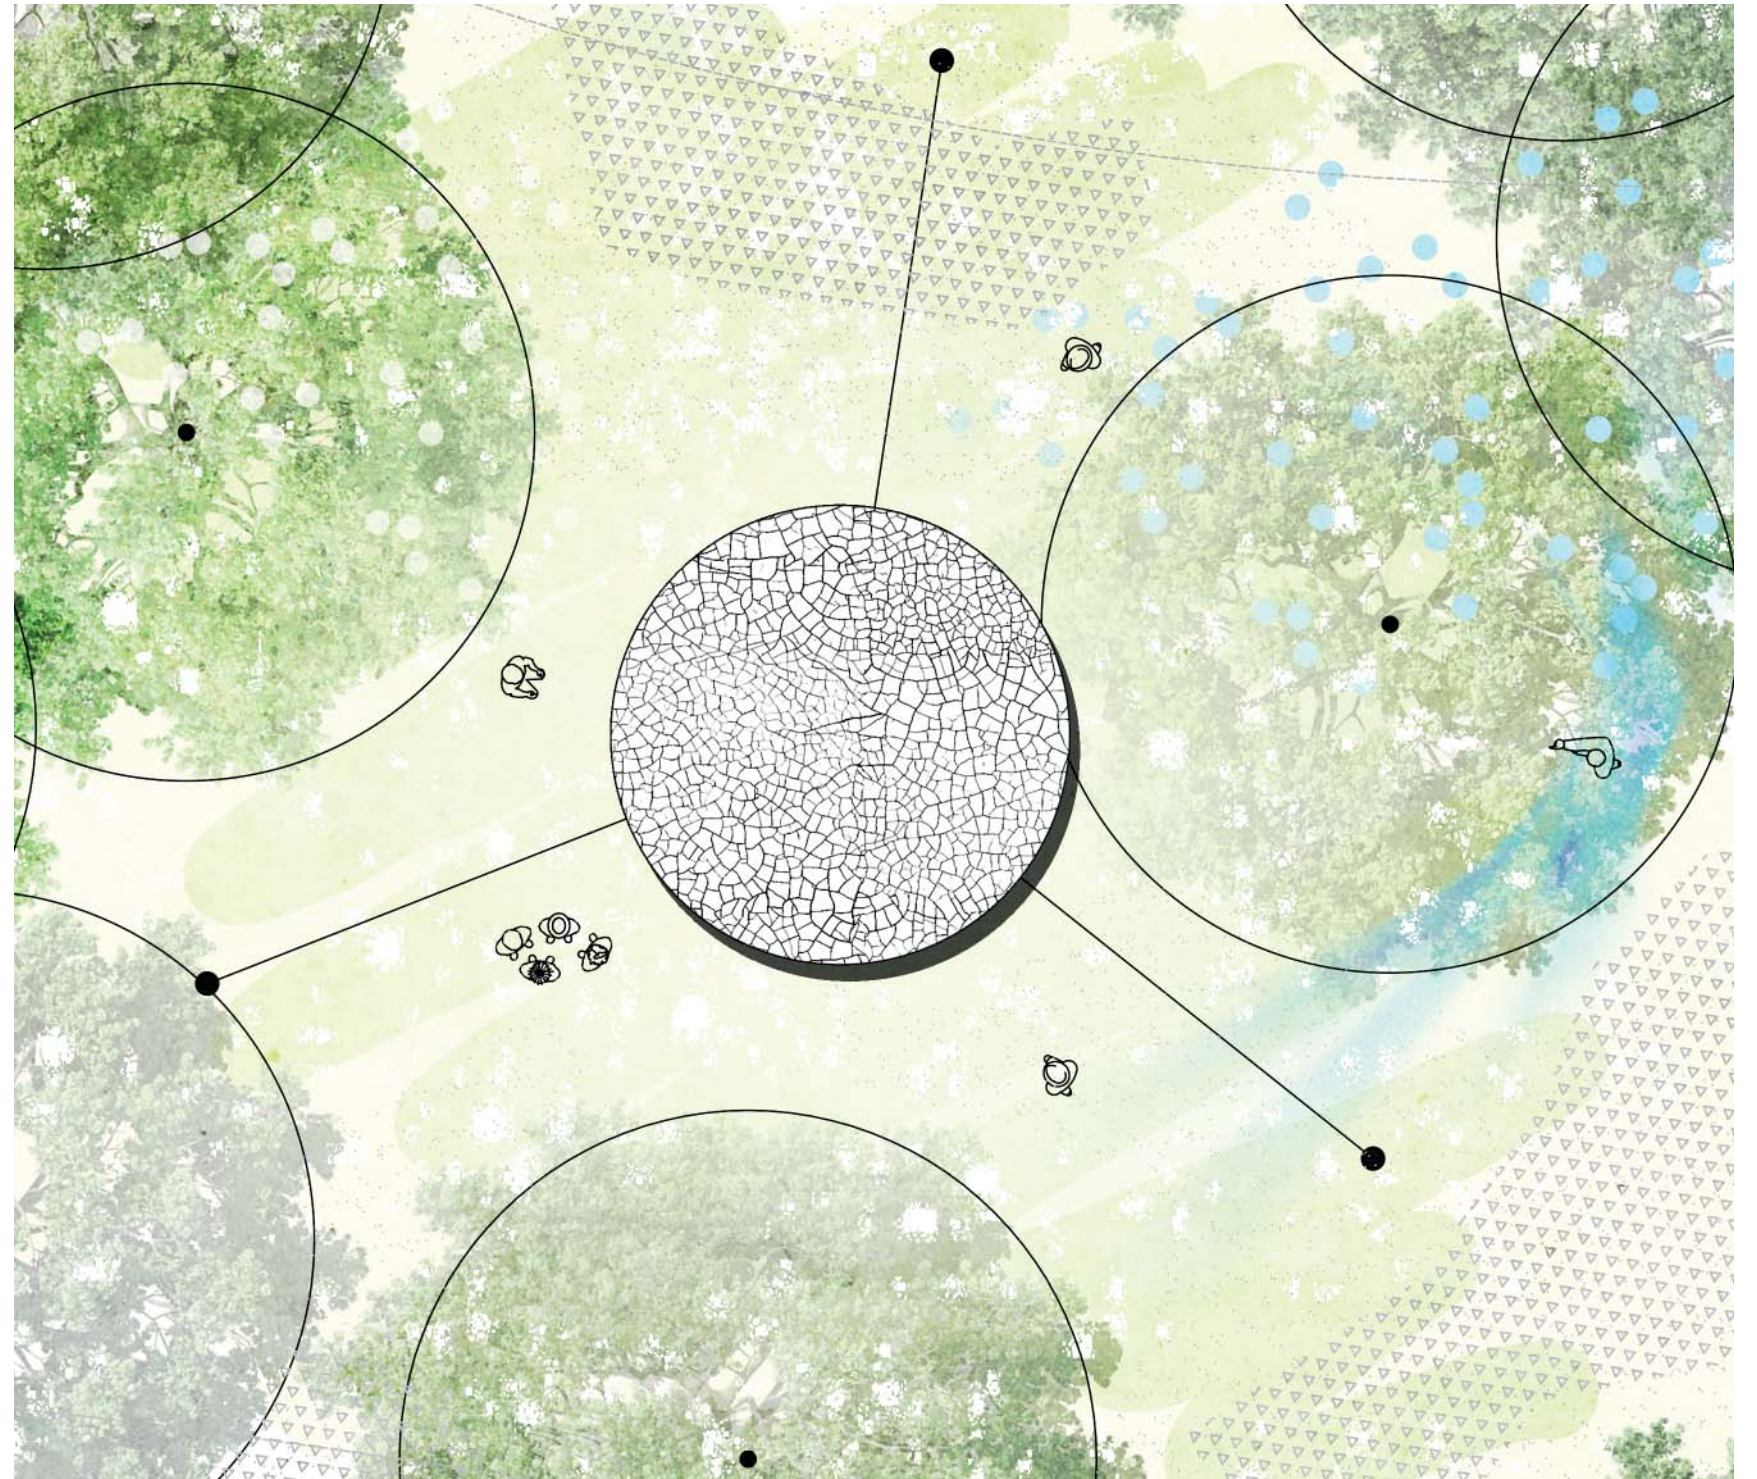

JARDIN DE METIS . INTERNATIONAL GARDEN FESTIVAL – 19TH EDITION 2018 - PLAYSAGES II – GO OUTSIDE AND PLAY!

PROJECT DESCRIPTION

At the edge of the forest, a mysterious brilliance attracts the attention of the visitor. It's a mirror cloud that floats between the crowns of the monumental trees. Once closer it becomes clear that the cloud is made up of ten thousand small mirror pieces. At the top the filtered sunlight is reflected, at the bottom a colorful spectacle takes place. This spectacle invites people to jump, play and lie down on a large, round trampoline. This trampoline is tensioned in a large, black crater formed by the projection of the cloud. Together, the trampoline and the mirror cloud create a magical place in the forest for encounter, play and spectacle.

“TOGETHER, THE TRAMPOLINE AND THE MIRROR CLOUD FORM A MAGICAL PLACE IN THE FOREST FOR ENCOUNTER, PLAY AND SPECTACLE. ”

The curved mirror plane provides a visual interaction between the surrounding forest, the people playing and bystanders. The mirror cloud is in itself a dead and non-functional object. However, due to its positioning and design, it gets various meanings. It becomes a medium that attempts to engage visitors with the environment at different levels. It's a visual beacon, a fantasy stimulus, a canopy, a lens, a mirror and a chandelier. But in the end it is nothing more than ten thousand small reflections of the beautiful forest landscape.
