

M.A.R.S.

Motivated. Active. Rational. Social.

Martian landscape and space conquest – these are the main inspirations for the “M.A.R.S. research station”.

Little astronauts have at their disposal:

- a big sandbox with red sand;
- a laboratory, place for pouring, sifting, weighing, measuring, grinding and conducting other „research” works;
- “rovers” that can be moved around the area with trolleys with buckets, shovels, rakes and sieves;
- a plant maze;
- boulders for climbing

and suitable coveralls that will allow you to “survive” on Martian soil (a gift for parents who will not have to wash red clothes).

INSTRUCTIONS FOR ASTRONAUTS

Please, go to the entrance chamber. Stay in the base only in overalls. Persons staying in the laboratory are asked to put down all research instruments. People who rent rovers are asked to leave a test report on a blackboard in the laboratory. Please enter singly for greenhouses.

M.A.R.S. Motivated. Active. Rational. Social.
