

- TREE PERSPECTIVE -

The entire project is made only from natural materials (bamboo, hemp rope)

The installation consists two parts:

1 - External, constructional with bamboo poles

2- Internal, soft made from woven bamboo strips (the same as used for garden fence mats)

Dimensions 6m x 6m x 10m (installation length (N) can be changed N x 2 meters)

On the one hand, a pavilion, a hut giving us a sense of security like a shelter or a house tree

On the other, a dead, cut tree through which we can go through under the subtle game of light and shadow.

The project can be received in two ways:

Lightly, Freely - frivolously, as a space to play

and slowly, peacefully as a pavilion of meditation
