Meeting Place

The meeting place concept is born from the peculiar location of the regional municipality of the Mitis between the mouths of Mitis and Saint Lawrence River, making this a charming place where there is a great biodiversity and allows the presence of diverser plant and animals species that we can not find in other places in Canada. So we wanted to capture this in our garden, creating this meeting space where the visitor can share and perceive the characteristics that this wonderfull place have. We represent the rivers in two roads with different characteristics as Saint Lawrence River acts as the backbone that divides the province into two, we represent it with a structure of columns, beams and bamboo making sounds with the wind and stimulating the visitor to create their own Melody and representing the ponds of the river mitis with rocks in a zen garden, the whole composition was designed to awaken the senses of the visitors from the textures in stone, wood and water of the pavements to the diversity of the plants in colors and sizes .
