

VIA PLUVIA

A REFRESHING THOUGHTFUL GAME

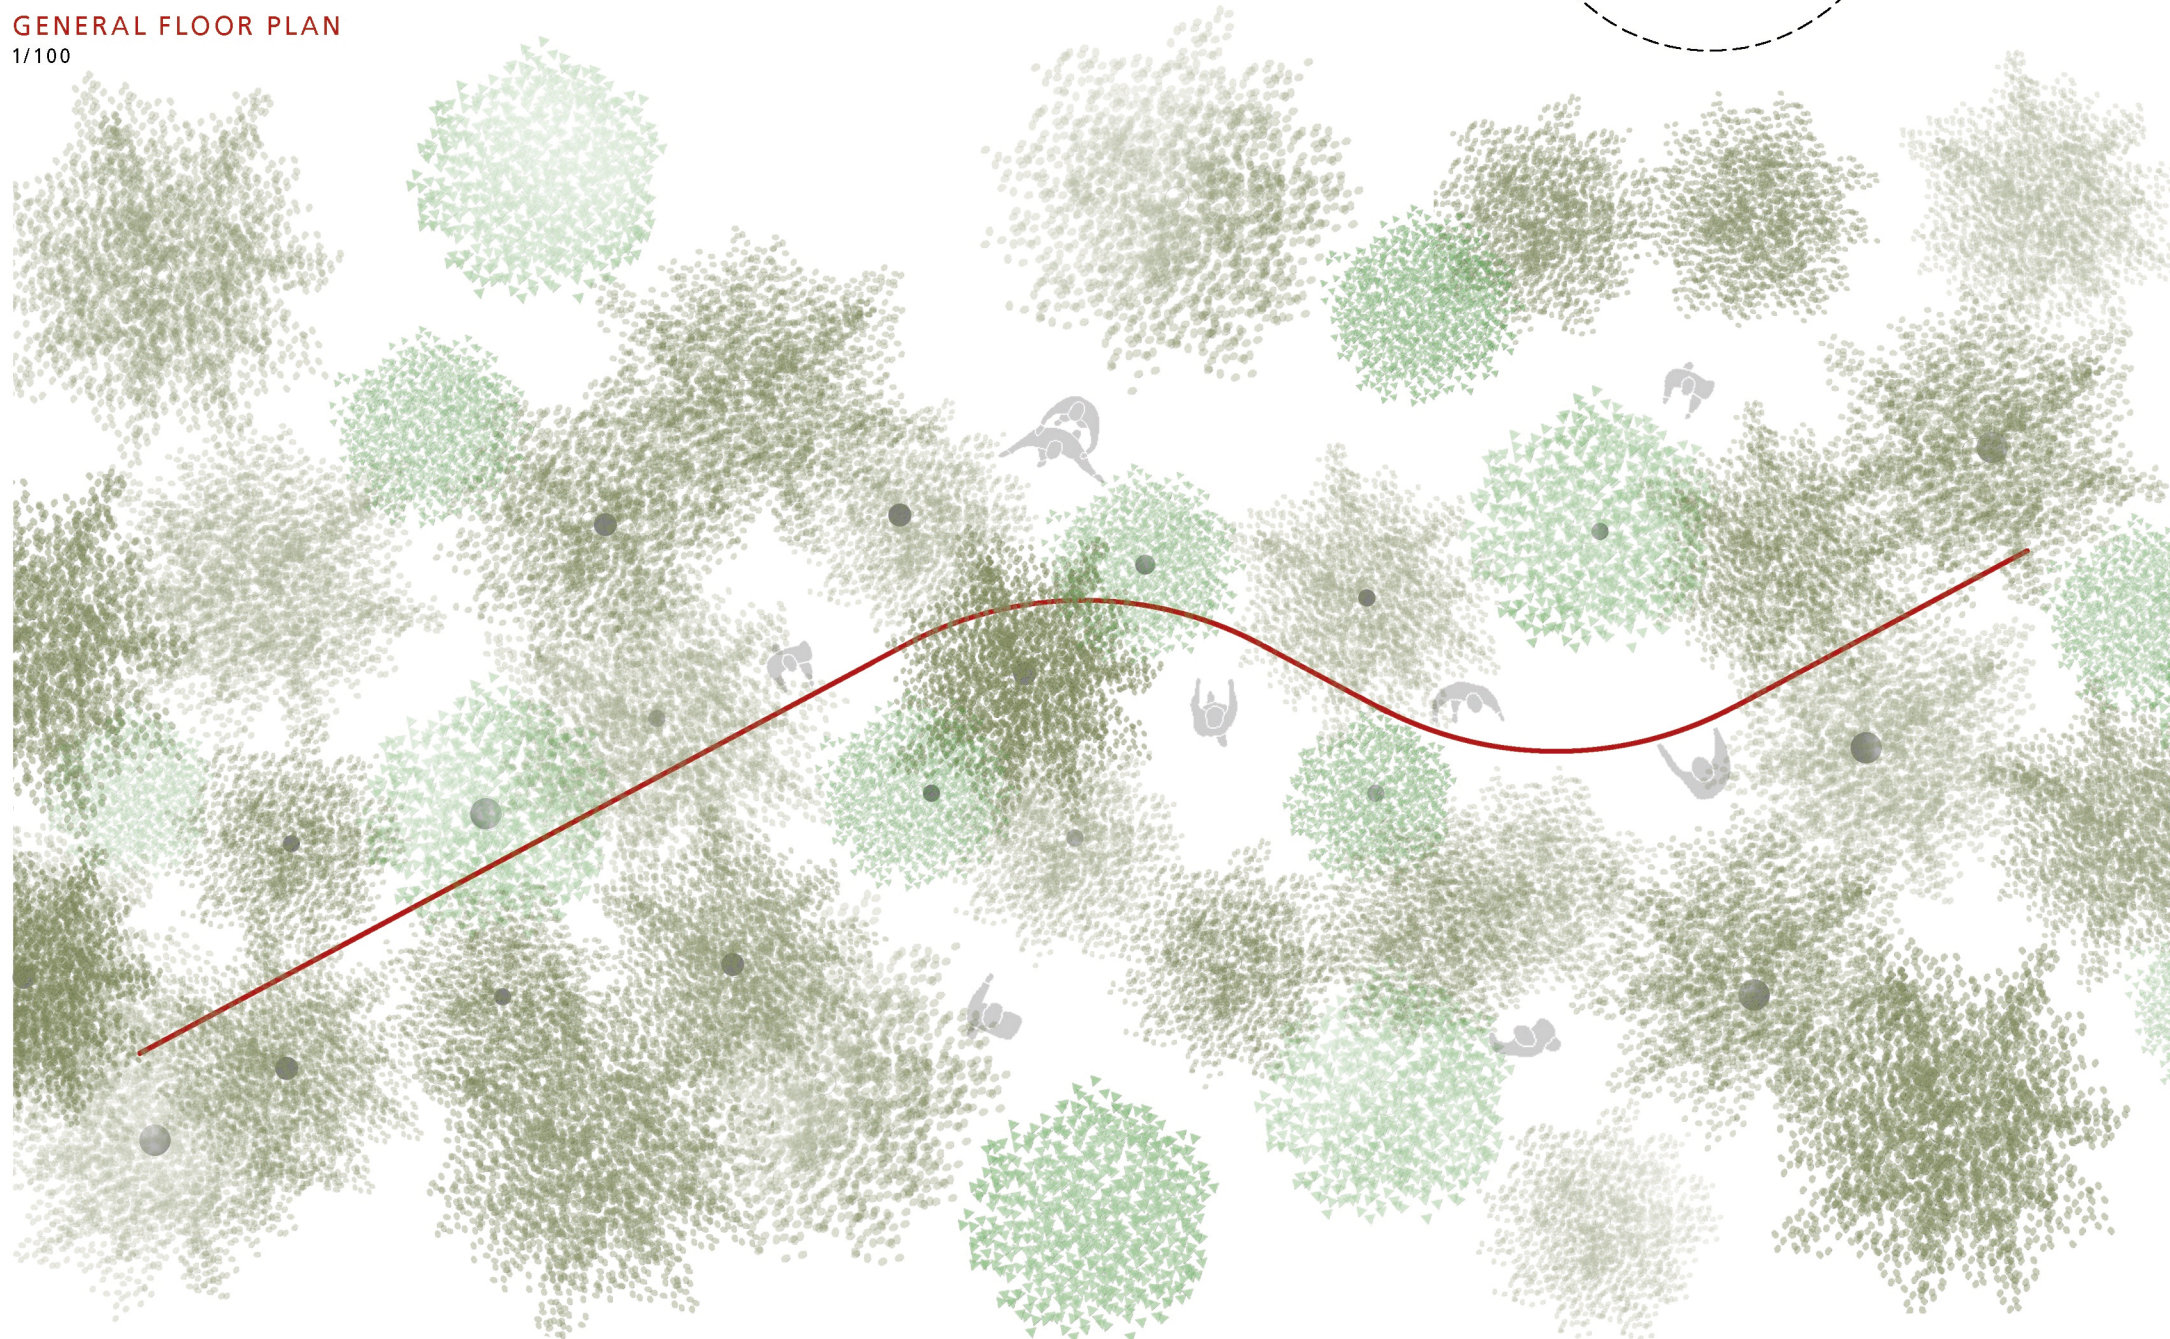

VIA PLUVIA is conceived as a reinterpretation of one of the traditional irrigation systems, now transformed as a new refreshing, interactive, sensitive and emotional installation.

We believe that this proposal, critic with the environment and the ecological impact of our society on the planet, can offer also a contemporary space for fun and multi-sensorial experiences. A poetic installation that with its rainy and foggy curtain aims to reflect the melting of ice and glaciers and the dramatic precipitation decrease of the past years. Moreover, the project is designed to be a new oasis where temperature and humidity are kept for the autochthonal plants to grow and live during the dry and hot summers that had characterized the area during the past years.

An inspiring place where art meets reflection, meditation and criticism, but also brings interaction, sensory and fun experiences to the visitors.
