

'NEST'

Vikas Patil

THE CONCEPT

Mankind has always sought inspiration from nature whether its food, clothing or shelter as it remains our most uncorrupted source of inspiration!

We got inspired by bird's nest as in our primitive search for shelter even today...in this sci-fi world!

Just a simple concentric formation of Bamboo make our Installation work ,the same simplicity that birds – the master builders follow while making their nests which looks complex but integrated and unique in it's own way irrespective of it's form,pattern,material, surface and technique.

THE VISITOR EXPERIENCE

Nests are missing, birds are disappearing.

City is busy and jam packed. How much space and time do we really need to recreate nature?

What would people like to hear while walking down their daily route in urban chaos-Car Horns or Birds singing-chirping?

Our artwork stands like a Nest Globe, along the pathway calling out people like a mimicking bird .Visitor may come there wondering, look through it poking inside out and when he does it, becomes a part of it- *a bird itself popping up of Nest!* Isn't it a recreation?

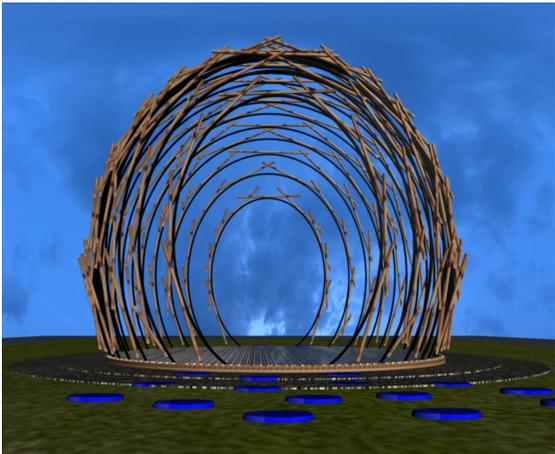

The nest is derived from the concept of bower birds nest and the way he decorates it from outside with pebbles and blue color attractive plastic.

We want people to come inside the nest admiring it from all side. Be a bird ,Have your Nest!

Our life-size nest is dedicated to Nature completely. 'NEST' is the most common feature, close to human habitation and LIVE always.

As it could be built ,literally, out of anything anywhere anyhow makes it more inspirational, economical ,of course keeping the functionality at first.

Our work is not very *Technical* in its approach but it does follow the law of simplicity. Simply placing of bammboo in a concentric manner resemble the twigs –leaves and adding Chirping sound at the base achieves the Biomimicry in landscape. One can be sure of joy and excitement just by looking at it.

Evolution of concept

'NEST'

THE TECHNICAL PRINCIPLE

Components: 19 concentric metal rings making an elliptical globe diameter at center (15mmx15mm hollow box section, metal base connecting all the metal rings, Bamboo tubes of different lengths.

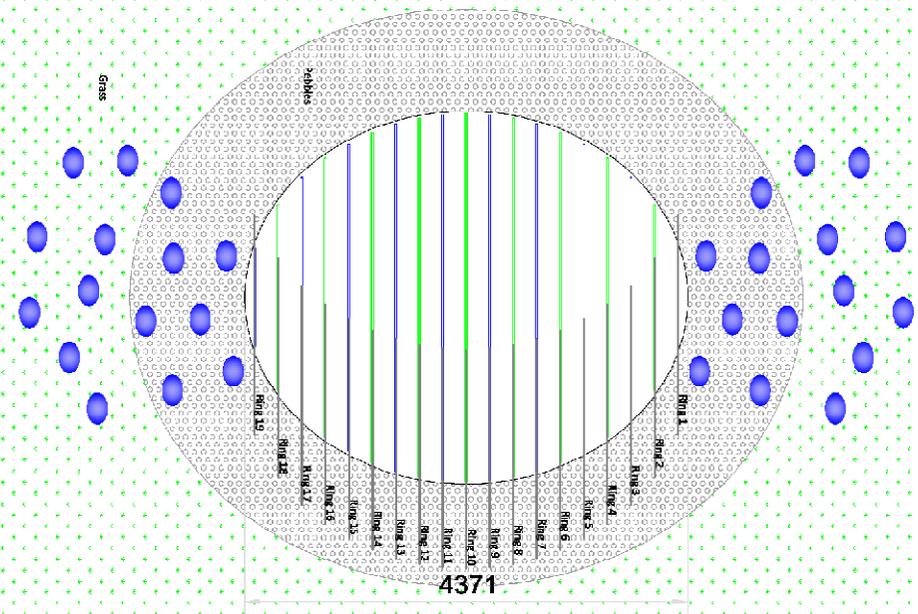

Proposed is an elliptical globe made of 19 concentric rings attached to the 4 metal arcs attached to a metal base. 9 no. Bamboo tubes to be mounted on each metal ring like twigs. The base is made of metal and bamboo covering. A 1 meter pebble bed and some blue color plastic stepping bases are placed at the entrance of the nest just like the decoration made by bower birds to attract attention.
